

AQUABAR

AquaBar Watersign Says **THANK YOU Texas!**

Offer applies to first unit purchased only.
Orders must be received by
August 31, 2007.

Some 'Aquababes' stopped by for a moment to pose in front of a Watersign unit.

AQUABAR Video!

'Water, Water, Everywhere!'

There was no shortage of water as rains swamped Dallas off and on, and a factory fire clouded the downtown skies with smoke, but **Expo '07** carried on and was a great show for all! We met with dozens of independent Texas restaurant owners who saw **AQUABAR** for the first time. We sold several units on-site to waterfront establishments, and had good talks with some institutional and chain operators as well.

AQUABAR is easily installed by the buyer within less than one hour...just level the LED Light Pan with the supplied level, set the waterfall on top, and you're ready to attract thirsty customers!

The **Short Unit** is 4 ft. wide, 3 ft. tall and 16 in. front-to-back. Three shelves have removable trays that hold up to 36 bottles. The **Tall 'WaterSign' Unit** can hold 27 bottles, and is 5 ft. tall, 3 ft. wide x 16 inches front-to-back. Many buyers set the Tall Unit on the floor of their entryways (or our 40 in. tall stand) as a welcoming marquee to complement the 2nd and 3rd Short Units they use as **'bar backs'**.

"**Full color vinyls of each customer's logo** are included and placed on the back of each unit to add even more value," says Patrick Freeman, **AQUABAR** inventor-attorney. "I work one-on-one with every buyer to make sure the custom vinyl we put on looks great before we ship. Each hand-crafted unit also comes with either a blue, white, or color-blending LED Light Pan with nearly **400 diodes** that produce a super sleek effect day or night."

Let **AQUABAR** change the sight, sound and feel of your establishment overnight! It's truly the **world's first portable, self-contained**, affordable water feature with the built-in functionality to serve as a working bar-back.
